

# Everbridge Resilience Insights

Continuously improving your response process is fundamental to building organizational resilience. This begins with understanding your organization's risk profile. Which disruptions are most likely to impact your operations and people? Everbridge Resilience Insights helps you understand the impact of operational disruptions and people as well as your teams' response to those events. These insights will help you measure and diagnose past performance, and identify opportunities for improvement.

## Deep dive into risk data to find patterns, trends and threat correlations

Gain access to rich risk intelligence feeds with fully customizable dashboards to query historical risk events across different threat types and severity. Fully customizable dashboards and visualizations allow you to narrow the data set for analysis.

## Prospectively measure operational risk

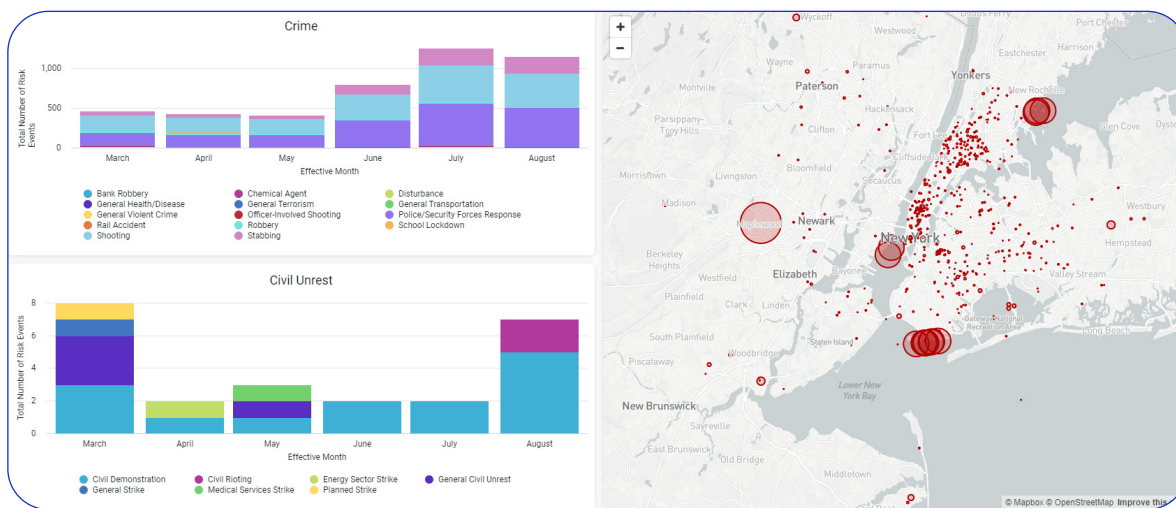

Leveraging years of risk event history and location intelligence, you will be able to assess risk for new operational areas. Conduct site analysis of new facilities, infrastructure locations, or field locations to understand the risk profile of that area including crime levels, natural disasters, disease, civil unrest, conflict, and more. Understand the seasonality of events which might impact your locations, as well as your supply chain and transportation. Leverage this information to make more informed decisions around new operations and mitigation steps.

## Understand how your organization is responding to critical events

Quickly analyze past risk events which have impacted your operations and the details of your team's response. Establish performance benchmarks and identify areas of improvement, including mean time to acknowledge (MTTA), time to launch an incident, and mean time to resolve (MTTR) by response team, type of incident, or numerous other risk and response details. Easily build reports to be shared across teams and with management.

## Everbridge resilience

Everbridge's Resilience Insights combines all these capabilities to help you understand the risk profile of your operations at a glance. With Everbridge risk intelligence, you'll be able to identify which assets have the highest risk profile and what is driving that risk giving you the opportunity to integrate that knowledge into your risk management framework and improve support for those assets.
