

# Control Center for Armed Forces Solutions Guide

**We help armed forces achieve their integrated base defense goals, at home and around the world: simplifying integration, increasing situational awareness and promoting quicker responses.**

Prepare for a better tomorrow with a future-proof platform that can do so much more for armed forces applications.

Data intelligence, situational awareness, and rapid and effective decision support are critical to physical security and force protection mission excellence and the operational effectiveness of armed forces security personnel. Armed forces around the world need to seamlessly integrate their various physical security and force protection subsystem and sensor technologies.

Tasked with base protection, they need to swiftly and accurately assess and appropriately react to incidents in accordance with established operational policies and procedures, in all threat conditions. Their challenge is to analyze, correlate and manage the vast amounts of data that today's security technologies produce.

### Physical security and force protection subsystem and sensor integration as a strategic enterprise asset

Control Center has been accredited to some of the highest and most recognized armed forces cybersecurity standards. It is used by armed forces security personnel and command staff responsible for executing physical security and force protection missions as a force multiplier to reduce troop-to-task functions. Control Center's federated system architecture facilitates additional operational efficiencies, delivers regional and/or global awareness and insight, and ensures operational consistency and high availability at the base level.

Control Center also monitors and displays the status of software processes, PSIM system hardware, network connection and subsystems using fully configurable dashboards and by generating alarms when certain system performance thresholds are not met. In addition, Control Center helps ensure optimal operator performance by monitoring, reporting, and

dashboarding relevant operator activity and metrics to identify knowledge gaps and training opportunities.

Armed forces using Control Center benefit from:

- + Open, standards-based, scalable, and secure architecture, providing the flexibility to efficiently add, upgrade, and remove and replace subsystems when new technology becomes available.
- + Industry-standard interfaces supporting hundreds of subsystem and sensor technologies out-of-the box, maximizing the use of existing subsystems and sensors, promoting openness, and preventing vendor lock-in.
- + Toolkit approach that enables a high degree of Human Machine Interfaces (HMI) tailoring, pre- and post-installation, making costly and often time-consuming software development unnecessary and providing flexibility to efficiently adapt to regulatory, policy and threat level change.

### ABOUT EVERBRIDGE

Everbridge, Inc. (NASDAQ: EVBG) is the global leader in critical event management and enterprise safety software applications that automate and accelerate an organization's operational response to critical events in order to keep people safe and businesses running. Everbridge is based in Boston and Los Angeles with additional offices in Lansing, San Francisco, Beijing, Kolkata, London, Oslo, Singapore, and Stockholm.
