COVID-19 SHIELD
Return to Work, Contact Tracing and Beyond

CORPORATE

The COVID-19 pandemic continues to cause unprecedented challenges for organizations everywhere. Hundreds of millions of people are still working from home due to nationwide lockdowns and returning to work has its own set of unique security risks. Now more than ever, it's important to understand the needs of employees, carefully coordinate their return to the workspace, and reestablish pre-crisis levels of safety and operations with risk assessment and contact tracing, all through a single pane of glass.

Know your Risk Landscape

As employees return to work, COVID-19 remains a constant presence with new outbreaks every day, not to mention other disruptions, natural or man-made, which can also impact your business operations.

Stay ahead of all potential risk developments with visual, real-time, hyper- local, rich, contextualized data on:

+ Severe weather and natural disasters
+ Civil unrest, protests
+ New COVID-19 outbreaks
+ COVID-19 declared quarantines
+ Travel restrictions and bans
+ Production stoppages
+ Local regulations and restrictions (PPE, etc...)

Quickly understand the possible impact on your employees, visitors, suppliers, supply chain routes, and customers, as well as employees' and executives' travel plans.

Keep Your Employees, Visitors and People Safe

You want to maintain a strong link with your people, wherever they are, and share with them what's important:

+ Survey employees to assess their health and needs
+ Conduct regular wellness checks
+ Determine employee's readiness for returning to work
+ Notify specific employees with rich, relevant, hyper-local information
+ Provide access to your organization's employee resource repository

KEEP YOUR EMPLOYEES, VISITORS AND PEOPLE SAFE

Leverage End-to-end Contact Tracing

Reach out to your people, anywhere they might be at any point in time, with end-to-end Contact Tracing capabilities which includes current, past and expected locations, potential exposure, and follow-up management. Should they be:

+ In your company's facilities and buildings (via integration with building access system, Wi-Fi hot spots, facility security equipment, and more)
+ Moving between buildings or campuses
+ Working remotely via GPS localization or self check-in
+ Traveling (via integration with your travel itinerary systems)

Capturing location data from different sources in addition to proximity data, while fully adhering to privacy regulations and restrictions, constitutes the richest information that helps you understand the potential exposure of your employees and therefore take appropriate actions.
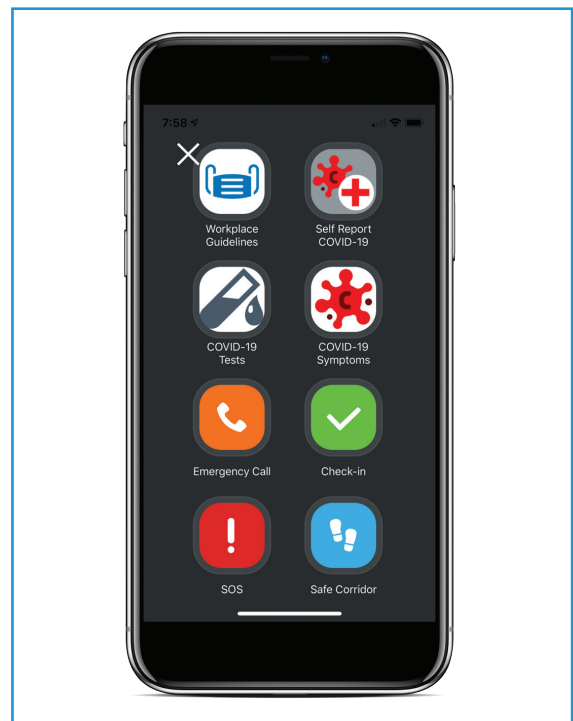

Recover Your Operations

Everbridge's purpose-built solution helps you navigate and manage the multiple dimensions of the recovery. The solution helps automate flexible task lists and workflows based on phased approach to returning to work safely.

In the event of new COVID-19 cases, the solution can rapidly identify people who may have been in contact with the infected person, and can communicate specific, confidential instructions to contain the spread and keep other employees safe and healthy. Leveraging Location History, the solution identifies possible past exposure when people were asymptomatic.

Flexible Workflows Because Every Organization is Different

Because clear, concise, and centralized information is paramount to keeping your employees safe and your operations running, the Everbridge mobile app offers custom widgets which can easily be configured so that employees get the following at their fingertips:

+ Be directed to a repository with your company's important news and resources related to COVID-19
+ Access their country's department of health symptom checker form
+ Self-report COVID-19 symptoms or infection
+ Receive information on the closest testing locations
