

Control Center for Federal Agencies Solutions Guide

Government and Federal Agency facilities at home or abroad are high threat environments; ensuring the protection and safety of these buildings and the people who use them is critical to national security.

Multiple locations, time zones, and priorities add to the size of the challenge. Mounting a 24/7 security operation, from geographically dispersed bases that utilize a mixture of physical security systems requires an effective integration platform to support threat mitigation and coordinate an effective response.

We help Government and Federal Agencies achieve their operational goals, at home and around the world: proactively safeguarding people, facilities and assets, while ensuring continuity of operations.

For many agencies, managing safety and security can be a daunting task.

- + Threats are increasing.
- + Risks are becoming more diverse.

Operations also continue to grow, involving:

- + More systems,
- + More data, and
- + Many more users.

All of this can be difficult to manage, and costly to control.

With Control Center, your agency can be safe, secure, and in operational control. Now and in the future.

Maintaining Operational Control

By their nature, government and federal agency missions need local and global visibility of all alarms, events, and alerts that risk their operations anywhere in the world. Making effective intervention decisions supported by all relevant data must be delivered to the right people at the right time.

These systems are complex in nature, massive in scale, and need to integrate thousands of devices. Managing the data generated by those systems, intelligently, is imperative to an efficient operation.

Creating a central security operations center is key to ensuring information is available at the point of need and in real-time.

Those responsible for global security operations using

Control Center benefit from:

- + Global and local situational awareness for faster responses to threats and risks anywhere in the world.
- + Proactive emergency preparedness and better emergency planning.
- + Centralization of all visual and sensor intelligence, irrespective of the manufacturer or the technology, resulting in increased identification of suspicious behavior, trends, and non-conformity.
- + Intelligent sharing of information to all appropriate personnel so they can act upon it in a coherent, structured, and effective way, increasing collaboration and ensuring faster responses to potential threats.
