Control Center for Museums
Solutions Guide

Museums have the unique challenge of protecting some of the most valuable assets in the world, while at the same time ensuring they are open, inspiring and accessible to the general public.

Ensuring the right people have the right information at the right time is imperative for museums during critical events.

Museum management must balance providing a sanctuary for visitors and the security needed to protect priceless artwork.

For visitors, museum security should be non-intrusive. For the would-be criminal, it should be a visible deterrent.

Museums have invested heavily in security technologies: CCTV, access control, intruder alarms, fire detection and suppression, intercoms, and many others. These systems are complex in nature based on the need to integrate many devices and then use that data to generate actionable insights that create an efficient and secure operation.

With Control Center, your museum can be safe, secure, and in operational control. Now and in the future.

The need for real-time situational awareness and control to protect people, facilities and assets.
Our work with critical national infrastructure clients around the world has enabled us to understand your challenges and offer solutions that meet your specific requirements.

Creating real-time situational awareness and rapid actionable insights from a common operating picture is the key to delivering the right information to the right people at the right time.

Those responsible for museums using Control Center benefit from:

+ Providing mission-critical levels of safety and security to people, facilities and assets.

+ Integrating with museum security devices, sensors and data to provide holistic control from a single user interface.

+ Centralizing control and creating a common operating picture to reduce information overload and increase response times.

+ Automating and creating compliant workflows to manage critical events, such as fires, flooding or theft.

+ Creating incident reports that can be used with senior management.

+ Protecting artifacts from changes in temperature and humidity that could cause them to deteriorate.

+ Avoiding technology lock-in restrictions.
