

Control Center for Safe Cities Solutions Guide

For many cities, managing safety and security can be a daunting task. Threats are increasing, and risks are becoming more diverse. Operations continue to grow, involving more systems, more data, and many more users.

All of this can be difficult to manage and costly to control. When a critical event unfolds, you need to get the right information to the right people at the right time to protect your people and city and ensure operational continuity.

Control Center is transforming the way cities view and manage their security. We're helping cities move from inefficient, siloed systems that are reliant on constant monitoring and input by operations personnel to information-based systems that proactively manage the increasing volume of information.

Control Center correlates events from disparate safety and security systems into a common operating picture to focus people's attention on what matters. The platform provides users with actionable alerts, next step actions, and automated reporting to better manage risks, ensure compliance with operating procedures and support your operational continuity. Automated workflows ensure rapid, consistent responses, reducing the risk of human error. It also facilitates device activation to ensure you are always in control of protecting your people.

Maintaining Operational Control

Safe City initiatives require proactive operational management to protect citizens from potential and real threats. Open technology solutions enable interoperability across agencies and technologies to drive active collaboration and intelligence sharing. Safe Cities need effective and scalable security solutions for surveillance, incident prevention, emergency response, evidence collection, and investment decisions.

City-wide sensors and communication networks collect enormous amounts of public safety data. Predictive information management will result in improved Safe City decision-making and responses to potential and actual safety events.

We've worked on Safe City solutions around the world, providing us with valuable insights into the security needs of authorities. Control Center provides:

- + Proactive physical security and predictive information management; going beyond passive and reactive.
- + Enables control from a central operations center and supports autonomous local operations.
- + An open platform with no technology lock-in restrictions, allowing integrations with existing or future technologies.
- + An adaptable and scalable solution.
