

Safety Connection

Protect Your People – Wherever They Are

REMOTE WORKERS

LONE WORKERS

CORPORATE CAMPUSES

TRAVELLERS

How do you know if your people are safe or need assistance?

The modern workforce is hybrid and mobile. Working from home, in the field or on a large campus – the traditional approach to physical security cannot keep your people safe. Critical events happen every day, anywhere: severe weather, workplace violence, active shooters, terrorism, IT or power outages.

Employees are more and more mobile, some continually in motion, and modern threats know no boundaries.

Everbridge Safety Connection enables you to quickly locate people at risk, immediately alert them, and keep them updated when a critical event occurs.

Dynamically update employee locations with Safety Connection

Whether employees are travelling or moving between campuses, Safety Connection aggregates location data from badge swipes on access control systems, wireless networks, travel itineraries, room reservation systems and mobile app check-ins. Using multiple location data points increases accuracy. During a critical event, Safety Connection dynamically helps you determine who is near or headed to an area of threat and send specific instructions when every second counts and even small distances matter.

Key Benefits:

- + Quickly locate all your employees in a crisis
- + Easily communicate with responders, stakeholders and people in harm's way
- + Give employees the protection of a security guard at the fraction of the cost with virtual security escorting
- + Improve incident-response and strategic risk management planning

Safety Connection

Protect Your People – Wherever They Are

The Everbridge Advantage

Everbridge Mobile App

SOS button alerts emergency call centers and automatically live streams video and audio when pressed. Locations are tracked only when permission is expressly given, ensuring end-user control and full privacy.

Virtual Security Guard

Offer employees virtual escorting through the Safe Corridor feature in the Everbridge Mobile App. Once activated the employee will leave breadcrumbs of their locations. They will be required to check in on a regular basis and if they don't, an SOS will automatically trigger an emergency request.

Dynamic Locations

Employees' last known and expected locations are displayed on an incident map by continuously cross-checking data from access control systems, travel management systems, HR systems, and smartphones, among other sources.

Incident Zones

Virtual geographic boundaries drawn around a critical event using GPS data. Notifications and alerts are automatically triggered when a device with the Everbridge Mobile App approaches the incident zone.

Everbridge Ecosystem

The largest ecosystem of security and business continuity partners in the industry extends the value of existing infrastructure investments, and speeds time to value. Strategic relationships include **International SOS, Lenel, Johnson Controls, Fusion Risk Management, Strategic BCP, Recovery Planner**, et al.
